BRINEX is a bio-based lubricant formulated to improve lubricity in water-based and brine-based drilling fluids.

**APPLICATIONS**
- Water- or brine-based drilling and completion fluids, including extended-reach and extreme pressure wells
- Coiled tubing and wireline operations
- 1 - 2% v/v in a continuous circulating system and 2 - 3% v/v in concentrated pills (typical)

**BENEFITS**
- Reduces metal-to-metal and metal-to-formation torque and drag without affecting drilling fluid properties
- Engineered for water- and brine-based systems to perform at low concentrations

**TREATMENT RECOMMENDATIONS**
BRINEX is a liquid additive added to a full circulating system or in concentrated pills. A standard circulating system recommended treatment is 1.5% v/v, with most applications using between 1 - 2% v/v.

Concentrated pills between 2 - 3% v/v are effective across difficult sections of excessive torque and drag, such as the build section during trips, while running casing, or while sliding in highly deviated boreholes.

To minimize risk of foaming, maintain hardness below 400 mg/l and ensure pH is < 9.5. Elevated risk of foaming is observed more often in freshwater/low-saturated brine. If required, use a non-alcohol based defoamer to combat foaming. As with any fluid additive introduction, pilot testing is recommended for new applications.

**PACKAGING AND HANDLING**
BRINEX is available in 275 gallon totes. Handle BRINEX as an industrial chemical, wearing protective equipment and observing precautions as described in the Safety Data Sheet (SDS).
